

PROFESSIONAL SUMMARY

GenAI-focused Full Stack Engineer with 2.5+ years of production experience building enterprise applications and AI-powered products across frontend, backend, APIs, and data layers. Experienced in TypeScript, React, Next.js, Python, FastAPI, C#.NET, PostgreSQL, RAG, embeddings, vector search, and LLM systems. Built and shipped an AI SaaS product used by 200+ users and an end-to-end RAG Knowledge Assistant, combining strong engineering fundamentals with product ownership.

SKILLS

Technical Skills:	Generative AI, RAG, Python, Embeddings, Semantic Search, Vector Search, Cosine Similarity, LLM APIs, Grounded Generation, React, Next.js, Angular, TypeScript, JavaScript, Tailwind CSS, Responsive UI/UX, Node.js, Express, FastAPI, C#.NET, REST APIs, Microservices, Authentication & Authorization, Caching, SQL, PostgreSQL, MongoDB, Prisma, Vector Storage, Embedding Indexing
Tools & Environment:	Git, Docker, VS Code, Postman, Vercel, Render, GitHub, Razorpay

PROFESSIONAL EXPERIENCE

Full Stack Developer at HCL Tech	2024-03 - Present
- Optimized application and API performance, reducing average response latency from ~5/seconds to ~1/second (H80% improvement) through code refinement, efficient data access patterns, and caching strategies. - Delivered 50+ enterprise features across 10 application modules for a manufacturing software platform, applying AI enhanced workflows and integrating Angular frontend with .NET APIs and PostgreSQL data layers. - Developed and integrated 100+ REST APIs that powered AI driven manufacturing processes, enabling seamless data exchange between frontend, backend, and business logic services. - Resolved 80+ production incidents across UI, API, and business logic layers by conducting root cause analysis, cross stack debugging, and delivering production ready fixes.	

KEY PROJECTS

AI Knowledge Assistant – RAG System
Built an end-to-end document grounded AI Knowledge Assistant supporting authenticated document upload, conversational querying, and streamed responses. Designed the RAG ingestion pipeline using 400 token chunks with 40 token overlap and 384 dimensional all MiniLM L6 v2 embeddings across 30+ test documents. Implemented semantic retrieval with cosine similarity (Top K=5, 0.3 similarity threshold) and integrated Llama 3.3 70B via Groq with low latency.
JobFit – ATS Resume Optimization Platform
Built and deployed a production AI SaaS platform reaching 200+ users, analyzing 300+ resumes and 300+ job descriptions. Developed AI assisted resume/JD matching with keyword extraction, multi dimensional scoring, and a 0–100 job fit score. Implemented PDF/DOCX processing, structured resume extraction, AI generated improvements, ATS friendly document generation, authentication, and PostgreSQL/Prisma data models. Integrated Razorpay for monetization, achieving 20+ paid users and ~13,000 revenue. Generated 6.22K Google impressions, 303 clicks, 4.9% CTR, and 9.7 average search position.

EDUCATION

Bachelor of Technology (Information Technology) — Sri Venkateswara College of Engineering
